CONTAINER ROOMS & LEISURE BUILDINGS

"Creating bespoke and versatile spaces for learning, living and working."

Bespoke and innovative modular spaces for learning, development and emotional wellbeing

Evolving Government thinking towards wellbeing in education

In recent times, we've seen a huge increase in recognition of the importance of improving emotional wellbeing for all pupils in schools, from all backgrounds.

Schools are now keen to provide additional spaces to improve inclusivity and expanding the range of emotional support available to every pupil.

Various funding, for example **Pupil Premium**, **PE & Sport Premium**, the **National Plan for Music Education**, and the **Schools Improvement Grant**, among others, is available for spaces that can be evidenced to improve emotional wellbeing, such as the following:

- | | | |
|--------------------------|------------------|---------------------------|
| 'Zen' Spaces | Break-out spaces | Wellbeing & Therapy Rooms |
| Small Specialist Classes | Libraries | Art Rooms |
| Sensory Rooms | Quiet spaces | Common Rooms |
| Activity Rooms | Music Rooms | IT Rooms |

Additional income opportunities for modular spaces

Because our modular solutions are separate from the main school buildings, there are opportunities for the school to offer wrap-around care, in the form of breakfast clubs, after-school / holiday clubs. These can be managed either in-house or via an external provider, allowing the school to gain from an additional income stream, as well as the provision of full wrap-around care for families and carers.

Our Spaces

Our prefabricated and modular classroom spaces are ideal for the education sector, where minimising disruption to the school is an absolute priority when looking to provide additional space.

Because most of the fabrication work is completed in our premises under controlled conditions, we can supply a fast and efficient solution for expanding your teaching and activity space, with only a few days needed on site to assemble the final product ready for immediate use.

Existing shipping containers

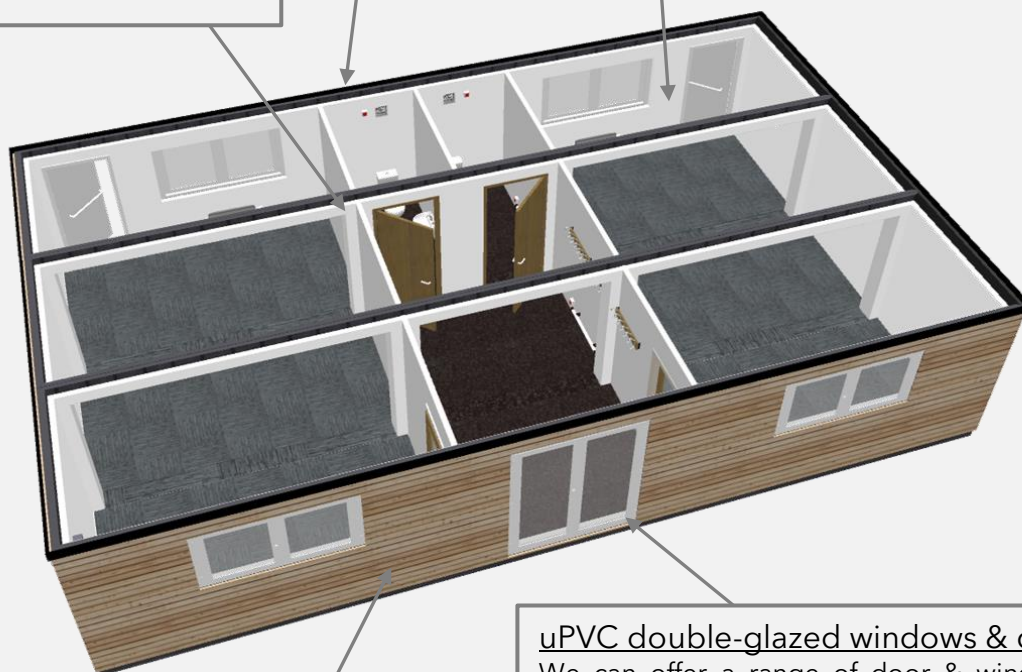

All our units start out in life as new shipping containers, spared a 25-year life circumnavigating the globe in the harshest of conditions. They are extremely robust, and an ideal foundation on which to create a sturdy, comfortable, versatile and cost-effective space for learning.

Internal layout options

Whether you need one 60m² open-plan classroom for 30 pupils, some smaller SEND break-out and therapy rooms; or kitchens, WCs, shower rooms, cleaners' stores; whatever your requirement, we can design and build it.

Fully insulated and lined

All our units include fully insulated walls, floors and ceilings, to allow comfortable use all-year-round and keeping heating costs down. Internal finishes can range from wipe-down vinyl panels, to timber loglap cladding for that cozy Alpine cabin feel.

uPVC double-glazed windows & doors

We can offer a range of door & window sizes, shapes & colours, all with various handles and finishes to suit your needs.

External cladding options

From premium Western Red Cedar cladding to the existing steel skin painted in a colour of your choice (or anything in between, the choice is yours).

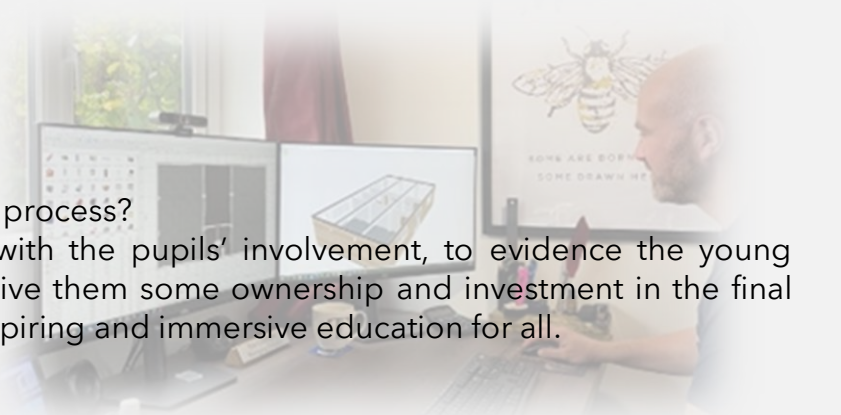

Internal finishes & electrics

All internal finishes, fixtures and fittings are designed bespoke to your requirements. Whether you opt for a bright and stimulating, air-conditioned high-activity space, or a muted, underfloor-heated, quiet and relaxing retreat, we can make it happen.

Interactive design workshops

Why not include the pupils in the design process?

We can even offer design workshops with the pupils' involvement, to evidence the young person's voice is being captured, and give them some ownership and investment in the final design, providing the opportunity for inspiring and immersive education for all.

Why use CWC Containers Ltd?

Health & Safety

Due to the prefabricated nature of our products, most of the construction of the units is completed in our premises, under controlled conditions. All works are closely monitored and strict procedures are followed.

Because of this, the works on-site are vastly reduced, avoiding the associated hazards and disruption of a more traditional construction project.

Build durations

Because of our off-site prefabrication, the construction of the units can be ongoing concurrently with the groundworks on site, therefore reducing the overall duration of the project, and allowing the school to benefit from additional space, without the associated disruption to the school.

Quality

With our projects being constructed in our own controlled environment, and along with our proud and dedicated eye for detail, we're confident of the highest quality finishes.

Flexibility

Due to the modular nature of the works, there are endless options for adding space quickly and cost-effectively. We can start with a blank page and develop the design alongside you and the school's requirements.

We can provide the units as a stand-alone package, or we can manage as a 'turn-key' package, and include all associated foundations and groundworks, to best fit with the school budget.

Portable

A shipping container's very nature is to be easily transportable. Because of this, all our buildings can be easily disassembled and moved via standard flat-bed lorry.
